Profile

My interest in computers started young — I'd spend hours digging through settings and system menus just to see what everything did, and upgrading my first PC's RAM taught me how much of a difference understanding the hardware makes. That curiosity eventually pulled me toward software, where I found what I enjoy most: a clear set of rules that, once learned, do exactly what you tell them to. I'm a systematic person who likes following a structured process through to a working result, and that mindset carried me through the Northcoders Enterprise Engineering bootcamp and the independent work I've built on since. I'm looking to bring that same curiosity and structured approach to a development team, and to keep growing as the technology does.

Technical Skills

Languages & Development:	C#, .NET, Java, Object-Oriented Programming, LINQ, Asynchronous Programming
Testing & Practices:	Test-Driven Development (TDD), NUnit, Shouldly, Moq, Agile Development
Backend:	ASP.NET Core, MVC, REST APIs, Dependency Injection, Entity Framework Core
Databases:	PostgreSQL, SQL Server, SQLite, Azure SQL, T-SQL, ADO.NET
Tools:	Git, GitHub, GitHub Actions, Docker, Visual Studio, Rider, PowerShell, Trello
Frontend:	Blazor, HTML, CSS, HttpClient

Projects

Calico – Full-Stack Productivity & Lo-Fi Music Application (Team Project, Extended Independently)

Live Demo: [Calico](#) | **GitHub:** [Frontend Repository](#) | [Backend Repository](#)

ASP.NET Core | Blazor | C# | SQLite | Entity Framework Core | Supabase Authentication | JWT | YouTube API | Docker | Railway | Azure SQL | Git | Trello

- Collaborated with a team of developers to build a full-stack productivity application combining lo-fi music with tools like a Pomodoro timer, playlists, and project tracking — pair-programmed the music search feature and contributed to backend functionality and testing
- After the bootcamp, carried out a full security review of the application and fixed several serious issues, including a bug that let users grant themselves admin access and one that let them view or edit other people's data and also added 95 automated tests to confirm the fixes worked
- Fixed major bugs in login, signup, and the dashboard so the app worked correctly for real users, restored the live music search feature, and deployed the finished app online with an automated build and deployment pipeline

Record Shop Application (Full Stack, Solo Project)

Live Demo: [Record Shop](#) | **GitHub:** [Frontend Repository](#) | [Backend Repository](#)

ASP.NET Core | Blazor | C# | Entity Framework Core | PostgreSQL | Docker | Railway | NUnit | Moq | Shouldly

- Built a full-stack record shop application for managing a record inventory, allowing users to view, search, add, edit and delete records
- Wrote automated tests covering every layer of the app - data access, business logic and API responses, connected to a pipeline that runs them automatically whenever the code changes
- Deployed the finished application online with the frontend and backend running as separate services, with automatic health checks confirming the app and its database stay up and running correctly in production

Professional Development

Northcoders Enterprise Engineering Bootcamp

Mar 2026 – Jun 2026

- Completed intensive training in C# and modern software development practices
- Applied object-oriented programming, clean code, and test-driven development in practical projects
- Solved coding challenges using logical thinking, debugging, and structured problem-solving
- Built full-stack applications and REST APIs using ASP.NET Core

Java Programming Masterclass (Udemy)

Self Study | Jan 2025 – Jan 2026

- Learning core Java concepts including variables, control flow, arrays, and object-oriented programming
- Strengthening programming fundamentals through practical exercises and projects

Google IT Support Professional Certificate (Coursera)

Self Study | Aug 2023 – Sep 2023

- Covered networking, operating systems, system administration, and IT security fundamentals

Work Experience

Visa Documentation Coordinator

PPV Worldwide Limited

London | Oct 2023 – Jul 2025

- Processed end-to-end visa applications, ensuring accuracy, compliance, and timely submission
- Used structured systems (Mosadaqa, QVP) for document verification and tracking application progress
- Maintained consistent and accurate client records across data-driven systems
- Communicated with clients and institutions to resolve issues efficiently
- Trained new staff on internal systems, procedures, and best practices

Food Delivery Courier

UberEats, Deliveroo & Stuart

London | Mar 2017 – Oct 2023

- Delivered orders efficiently across a high-volume, fast-paced schedule, building strong time-management and route-planning skills while working independently

Education

BSc (Hons) Computer Science | Studied to final year

Greenwich School of Management

2014 – 2017

- **Relevant modules:** Programming (Java & C#), Software Engineering, Database Management Systems, Systems Analysis and Design

BTEC Level 3 Extended Diploma in ICT

The College of Haringey, Enfield and North East London

2008 – 2012

- Modules included Software Design, Troubleshooting, Web Development, Databases, and E-Commerce

Interests

- Strength training, cardio and healthy eating – built a consistent routine after recognising the importance of long-term health, improving discipline and lifestyle habits
- Building personal coding projects to strengthen my C#/.NET skills and apply concepts in real-world scenarios
- Building and upgrading computer systems – interested in how hardware components work together and impact system performance
- Following developments in technology, including AI and emerging technologies, to stay up to date with new features; previously built and ran a small GPU-based cryptocurrency mining rig
