NAZMUL HUSSAIN

Junior C#/.NET Developer

London | 07392 730717 | nazmulhussain@hotmail.co.uk
nazmulhussain.co.uk | github.com/Nazmul5765 | linkedin.com/in/nazmul-hussain

Profile

Junior Software Engineer with a solid foundation in C#, .NET 8, and full-stack web development, shaped by the Northcoders Enterprise Engineering Bootcamp. Driven by a systematic approach to software design, with hands on experience building full stack applications using ASP.NET Core, Blazor and Entity Framework Core, backed by automated testing (NUnit, Moq and Shouldly) and CI/CD via GitHub Actions. Successfully designed, containerised with Docker, and deployed two production grade web applications to Railway backed by Azure SQL and PostgreSQL, all showcased live on my personal portfolio website

Technical Skills

Languages & Development: C#, .NET 8, Java, Object-Oriented Programming, LINQ, Asynchronous Programming

Backend: ASP.NET Core, MVC, REST APIs, Controller-Service-Repository Pattern, JWT Authentication, Middleware, Health Checks, Caching, Dependency Injection, Entity Framework Core

Frontend: Blazor, HTML, CSS, HttpClient

Databases & Cloud: PostgreSQL, SQL Server, SQLite, Azure SQL, T-SQL, ADO.NET, Supabase, Railway

Testing & Practices: Test-Driven Development (TDD), NUnit, Shouldly, Moq, Agile Development, CI/CD

Tools & Workflow: Git, GitHub, GitHub Actions, Docker, Visual Studio, Rider, PowerShell, Trello, Claude, ChatGPT

Projects

Calico – Full-Stack Productivity & Lo-Fi Music Application (Team Project, Extended Independently)
Live Demo: Calico | **GitHub:** Frontend Repository | Backend Repository

.NET 8 | ASP.NET Core | Blazor | C# | SQLite | Entity Framework Core | Supabase Authentication | JWT | YouTube API | Caching | Health Checks | Docker | Railway | Azure SQL | GitHub Actions | Git | Trello

- Built the full stack productivity and lo-fi music application in a collaborative pair-programming team, taking ownership of the YouTube API music search, frontend profile management, backed data flows, and API health check endpoints
- Conducted a comprehensive post bootcamp security audit, fixing critical privilege-escalation (self-promotion) and IDOR data exposure vulnerabilities by implementing rigorous ownership checks and strict role-based access control
- Engineered 95+ automated unit and integration tests (Nuit, Moq, Shouldly) to secure authentication flows, stabilise core database operations, and ensure robust regression coverage
- Restored live YouTube music search by replacing mock data with real API calls and implemented a 15 minute in-memory caching layer to prevent the rate limits, backed by an automated CI/CD pipeline via Docker and GitHub Actions

Record Shop Application (Full Stack, Solo Project)
Live Demo: Record Shop | **GitHub:** Frontend Repository | Backend Repository

.NET 8 | ASP.NET Core | Blazor | C# | Entity Framework Core | EF in-Memory | SQL Server | PostgreSQL | Neon | Docker | Railway | NUnit | Moq | Shouldly | GitHub Actions | Git

- Engineered a full-stack record shop application using ASP.NET Core Web API and Blazor, implemented a clean Controller-Service-Repository pattern with EF Core for robust record management and search functionality
- Wrote comprehensive automated tests covering all architectural layers: repository, service, and controller using NUnit, Moq and Shouldly, integrated into a GitHub Actions CI pipeline for automated regression validation
- Containerized and deployed the decoupled architecture via Docker to Railway, configuring a production PostgreSQL database hosted on Neon and custom health-check endpoints to monitor database connectivity

Professional Development

Northcoders Enterprise Engineering Bootcamp in C# Mar 2026 – Jun 2026

- Completed intensive 13 week full-stack software engineering training focused on C#, .NET 8, ASP.NET Core and modern web application development
- Practiced Test-Driven Development (TDD) and Clean Code principles, utilizing NUnit and Moq to engineer robust backend unit and integration test suits
- Collaborated in agile team environments, applied pair programming as both, driver and navigator, used Git and GitHub for version control workflows, code reviews and daily stand-ups during group project

Java Programming Masterclass (Udemy) Self Study | Jan 2025 – Jan 2026

- Learned core Java concepts including variables, control flow, arrays, and object-oriented programming
- Strengthened programming fundamentals through practical exercises and projects

Google IT Support Professional Certificate (Coursera) Self Study | Aug 2023 – Sep 2023

- Covered networking, operating systems, system administration, and IT security fundamentals

Work Experience

Visa Documentation Coordinator

PPV Worldwide Limited London | Oct 2023 – Jul 2025

- Processed end-to-end visa applications, ensuring accuracy, compliance, and timely submission
- Used structured systems (Mosadaqa, QVP) for document verification and tracking application progress
- Maintained consistent and accurate client records across data-driven systems
- Communicated with clients and institutions to resolve issues efficiently
- Trained new staff on internal systems, procedures, and best practices

Food Delivery Courier

UberEats, Deliveroo & Stuart London | Mar 2017 – Oct 2023

- Delivered orders efficiently across a high-volume, fast-paced schedule, building strong time-management and route-planning skills while working independently

Education

Diploma of Higher Education (DipHE) in Computer Science

University of Plymouth (GSM London) 2014 – 2017

- **Relevant modules:** Programming (Java & C#), Software Engineering, Database Management Systems, Internet Development, Systems Analysis and Design

BTEC Level 3 Extended Diploma in ICT

The College of Haringey, Enfield and North East London 2008 – 2012

- Modules included Software Design, Troubleshooting, Web Development, Databases, and E-Commerce

Interests

- Strength training, cardio and healthy eating - have built a consistent routine after recognising the importance of long-term health, improving discipline and lifestyle habits
- Developing personal coding projects to strengthen my C#/.NET skills and apply concepts in real-world scenarios
- Building and upgrading computer systems: interested in how hardware components work together and impact system performance
- Following developments in technology, including AI and emerging technologies, to stay up to date with new features; previously built and ran a small GPU-based cryptocurrency mining rig
