Profile

Junior C#/.NET developer who recently completed the Northcoders Enterprise Engineering bootcamp, with a strong interest in technology and software development. My interest developed through hands-on experience building and upgrading my own PC, which sparked my curiosity for problem-solving and software systems.

With a background in computing and experience working in structured, data-focused environments, I have developed a logical and detail-oriented approach. I particularly enjoy backend development and building reliable applications using clean and well-structured code.

I am looking forward to applying my skills in a junior developer role, continuing to develop as a software engineer, and contributing as a valued member of a team.

Technical Skills

Languages & Core:	C#, .NET, Java, Object-Oriented Programming, LINQ, Async Programming
Testing & Practices:	Test-Driven Development (TDD), NUnit, Shouldly, Moq, Agile Development
Backend:	ASP.NET Core, MVC, REST APIs, Dependency Injection, Entity Framework Core
Databases:	PostgreSQL, SQL Server, SQLite, T-SQL, ADO.NET
Tools:	Git, GitHub, GitHub Actions, Docker, Visual Studio, Rider, PowerShell, Trello
Frontend:	Blazor, HTML, CSS, HttpClient

Projects

Calico – Full-Stack Productivity & Lo-Fi Music Application (Team Project, Extended Independently)

Live Demo: [Calico](#) | **GitHub:** [Frontend Repository](#) | [Backend Repository](#)

ASP.NET Core | Blazor | C# | SQLite | Entity Framework Core | Supabase Authentication | JWT | YouTube API | Docker | Railway | Azure SQL | Git | Trello

- Collaborated in a team to build a productivity application that combines lo-fi music with tools including music search, playlists, timers, projects and user accounts.
- Pair programmed on the YouTube integration, enabling users to search for music and play selected videos within the application, while also contributing to backend functionality, testing and dashboard features.
- Independently implemented API and database health checks to monitor whether key parts of the application were running correctly, and developed a Pomodoro timer prototype that controlled music playback based on a 25-minute focus session.
- After the bootcamp, reviewed the application independently to find and fix security weaknesses, including issues that could have let users access or change other people's information without permission.
- Rebuilt the login and sign-up process to work correctly, replaced a temporary placeholder for the music search feature with the real working version, finished the timer feature left incomplete during the bootcamp, and deployed the finished application online for anyone to use.

Record Shop Application (Full Stack)

Live Demo: [Record Shop](#) | **GitHub:** [Frontend Repository](#) | [Backend Repository](#)

ASP.NET Core | Blazor | C# | Entity Framework Core | PostgreSQL | Docker | Railway | NUnit | Moq | Shouldly

- Built a full-stack record shop application for managing a record inventory, allowing users to view, search, add, edit and delete records.
- Developed the application so changes made through the user interface are processed by the backend and stored persistently, keeping record information available between sessions.
- Added automated testing and health checks to verify that key parts of the application behave correctly and to help identify problems with the application or database.
- Deployed the completed application online using Railway, with the frontend and backend running as separate services and a Neon PostgreSQL database providing persistent production data.

Professional Development

Northcoders Enterprise Engineering Bootcamp

Mar 2026 – Jun 2026

- Completed intensive training in C# and modern software development practices
- Applied object-oriented programming, clean code, and test-driven development in practical projects
- Solved coding challenges using logical thinking, debugging, and structured problem-solving
- Built backend applications and REST APIs using ASP.NET Core

Java Programming Masterclass (Udemy)

2025 – Present (Self-Study)

- Learning core Java concepts including variables, control flow, arrays, and object-oriented programming
- Strengthening programming fundamentals through practical exercises and projects

Google IT Support Professional Certificate (Coursera)

2023

- Covered networking, operating systems, system administration, and IT security fundamentals

Work Experience

Visa Documentation Coordinator

PPV Worldwide Limited

London | Oct 2023 – Jul 2025

- Processed end-to-end visa applications, ensuring accuracy, compliance, and timely submission
- Used structured systems (Mosadaqa, QVP) for document verification and tracking application progress
- Maintained consistent and accurate client records across data-driven systems
- Communicated with clients and institutions to resolve issues efficiently
- Trained new staff on internal systems, procedures, and best practices

Food Delivery Courier

UberEats, Deliveroo & Stuart

London | Mar 2017 – Oct 2023

- Delivered orders efficiently while maintaining high customer satisfaction in a fast-paced environment
- Developed strong time management and route optimisation skills working independently
- Communicated effectively with customers and handled issues in real-time

Education

BSc (Hons) Computer Science (studied to final year)

Greenwich School of Management

2014 – 2017

- **Relevant modules:** Programming (Java & C#), Software Engineering, Database Management Systems, Systems Analysis and Design

BTEC Level 3 Extended Diploma in ICT

The College of Haringey, Enfield and North East London

2008 – 2012

- Modules included Software Design, Troubleshooting, Web Development, Databases, and E-Commerce

Interests

- Building personal coding projects to strengthen my C#/.NET skills and apply concepts in real-world scenarios
- Building and upgrading computer systems – interested in how hardware components work together and impact system performance
- Strength training, cardio and healthy eating – built a consistent routine after recognising the importance of long-term health, improving discipline and lifestyle habits
- Following developments in technology, including AI and emerging technologies, to stay up to date with new features; previously built and ran a small GPU-based cryptocurrency mining rig
